A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/27/07 has been entered.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 20 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Elschner et al, 5,917,279 (E).

E discloses an organic light emitting diode comprising an anode 2; cathode 6; electroluminescent layer 4; "buffer" layer 5 comprising an electrically conductive polymer with dispersed nanoparticles of alumina Al<sub>2</sub>O<sub>3</sub>(col.2 lines 5-30), for example. Claim 20 is anticipated by E, or at least obvious over E depending on one's interpretation of "buffer", "electrically conductive polymer", etc. Because the exact language of the claims is not present in E, the claim is considered anticipated or

obvious. Labels such as "buffer" are not considered to structurally distinguish over layers 3 or 5 of E likewise arbitrarily labeled. See *In re Swinehart* 169 USPQ 226, *Ex parte Minks* 169 USPQ 120 and *In re Pearson* 181 USPQ 641 where it was decided that functional language, statements of intended use, or mere labels do not structurally distinguish claims over anticipating prior art.

There are also no magnitudes of "electrical conductivity" claimed or disclosed to structurally distinguish the claimed "electrically conductive polymer" over the polymer of E likewise inherently having an "electrical conductivity".

Applicant's arguments with respect to claim 20 have been considered but are moot in view of the new ground(s) of rejection.
